

○ MEDUSE : THE VALUE OF OUR EXPERTISE

CARDS AND WIRING - INTEGRATION OF EQUIPMENTS

In an industrial world in movement, which is globalizing and transforming, all the sectors of activity which constitute it are invited to break down their trade barriers of yesterday to better build, together, a new and progressive industry.

At AQLE, we know that our expertise is part of a global contribution of all the expertise requested. All are destined to «know» each other and to come together harmoniously, to better generate value and «combined progress». It is therefore in this integrated vision of the modern, strategic and future industry that we are proud to situate our profession of architect, manager and producer of complex electronics.

CO-DESIGN, THE 360° SPIRIT

As an extension of our own collaborative modes of operation, we at AQLE invest in collective knowledge, a virtue inherent to the principles of co-design. The right electronic solution is the one that best manages complexity. This complexity must be understood in its entirety, regardless of the industrial and professional references it covers. It is a large chain of values that is at stake: mechanics, data, electronic studies, but also metallurgy, plastics, robotics... Thus, from the upstream phases of understanding, study and design, it is by going beyond the sole field of our electronic know-how and expertise that we are interested in and take into account all information, innovations and values, wherever they may come from.

REQUIREMENT – GLOBALIZATION – EXPERTISE – ORGANIZATION

Our «Meduse» AQLE, a collective work, is intended to represent this open and collaborative approach that characterizes us: to include our know-how and expertise in an integrating vision of the multiple specificities and values required by any industrial specification.

MANAGEMENT & CORPORATE COMMITMENT

United by the same AQLE values in the project of excellence, the collaborators constitute together the central guarantee of the collective expertise. Dynamic, always on the move, this «human value» is recognized and we offer it to all our clients.

- Participative management.
- Collaborative work, autonomy and co-responsibility: guarantees of well-being at work.
- Team versatility, linked to our training policy and the commitment of our employees.
- Adaptability and agility, both methodological and technological.
- Openness to change, ability to manage complexity.

This demand for human added value is applied and shared with each of our professional partners and all our suppliers.

FORESIGHT & INNOVATION

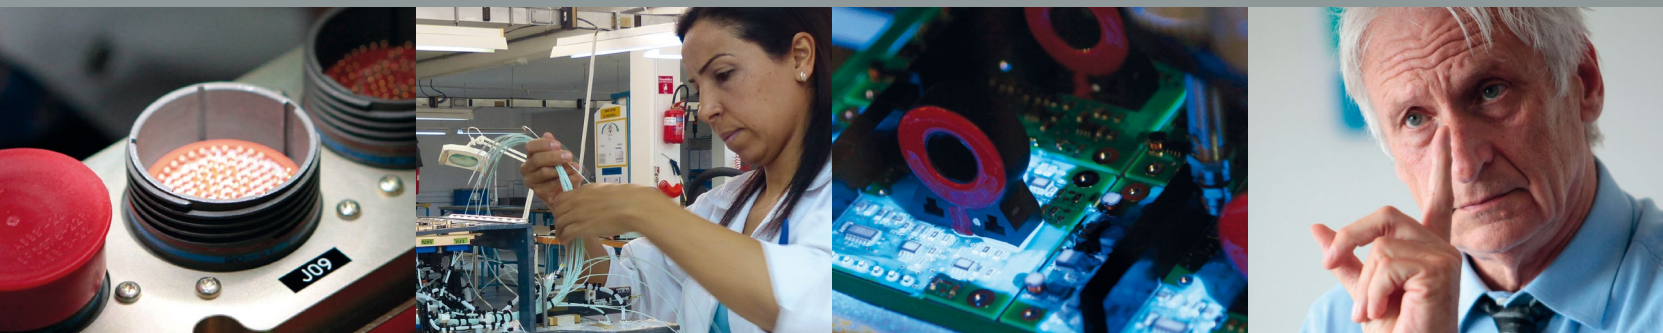

Within the framework of our business processes, we include the AQLE expertise in the global vision of the industrial and technical problems which are entrusted to us.

- Value analysis, a prerequisite for performance.
- Open and multi-trade vision.
- Technological, regulatory and market watch.
- Great capacity for technological innovation, thanks to living processes: flexible, adaptable, not fixed.
- Strong collective maturity, nourished by cross-sectoral experiences.
- In parallel with our internal electronic dematerialization initiatives, our concrete prospective approaches (know-how and services) in the field of connected electronics.

This AQLE approach, which is always open to the future, is nourished by listening and by related business inputs. It allows us to make a unique case of each customer request, always susceptible to progress and innovation.

MORE THAN 150 EMPLOYEES

SOMALEC : AQLE IN TUNISIA

SOMALEC was created in 2007 in Tunisia to optimize costs. With the same degree of requirement, with the same «in-house» know-how, SOMALEC is the perfect replica of AQLE processes.

PRODUCTION POLE: AQLE QUALITY AT REDUCED PRICES.

● OPTIMIZATION & RATIONALIZATION

At AQLE, we quickly understood the importance for our clients to have a perfect command of the services related to the development of any project.

- Streamlining and valuing steps are the key words that drive our organization.
- Architecture and organization of know-how for any process.
- In service delegated by our customers, performance of our management of purchases and supplies of components.
- Double quality requirement of the customer supply chain: control of production schedules and costs.
- Control of international flows, including control of the customs obligations of projects.

250 ACTIVE SUPPLIERS

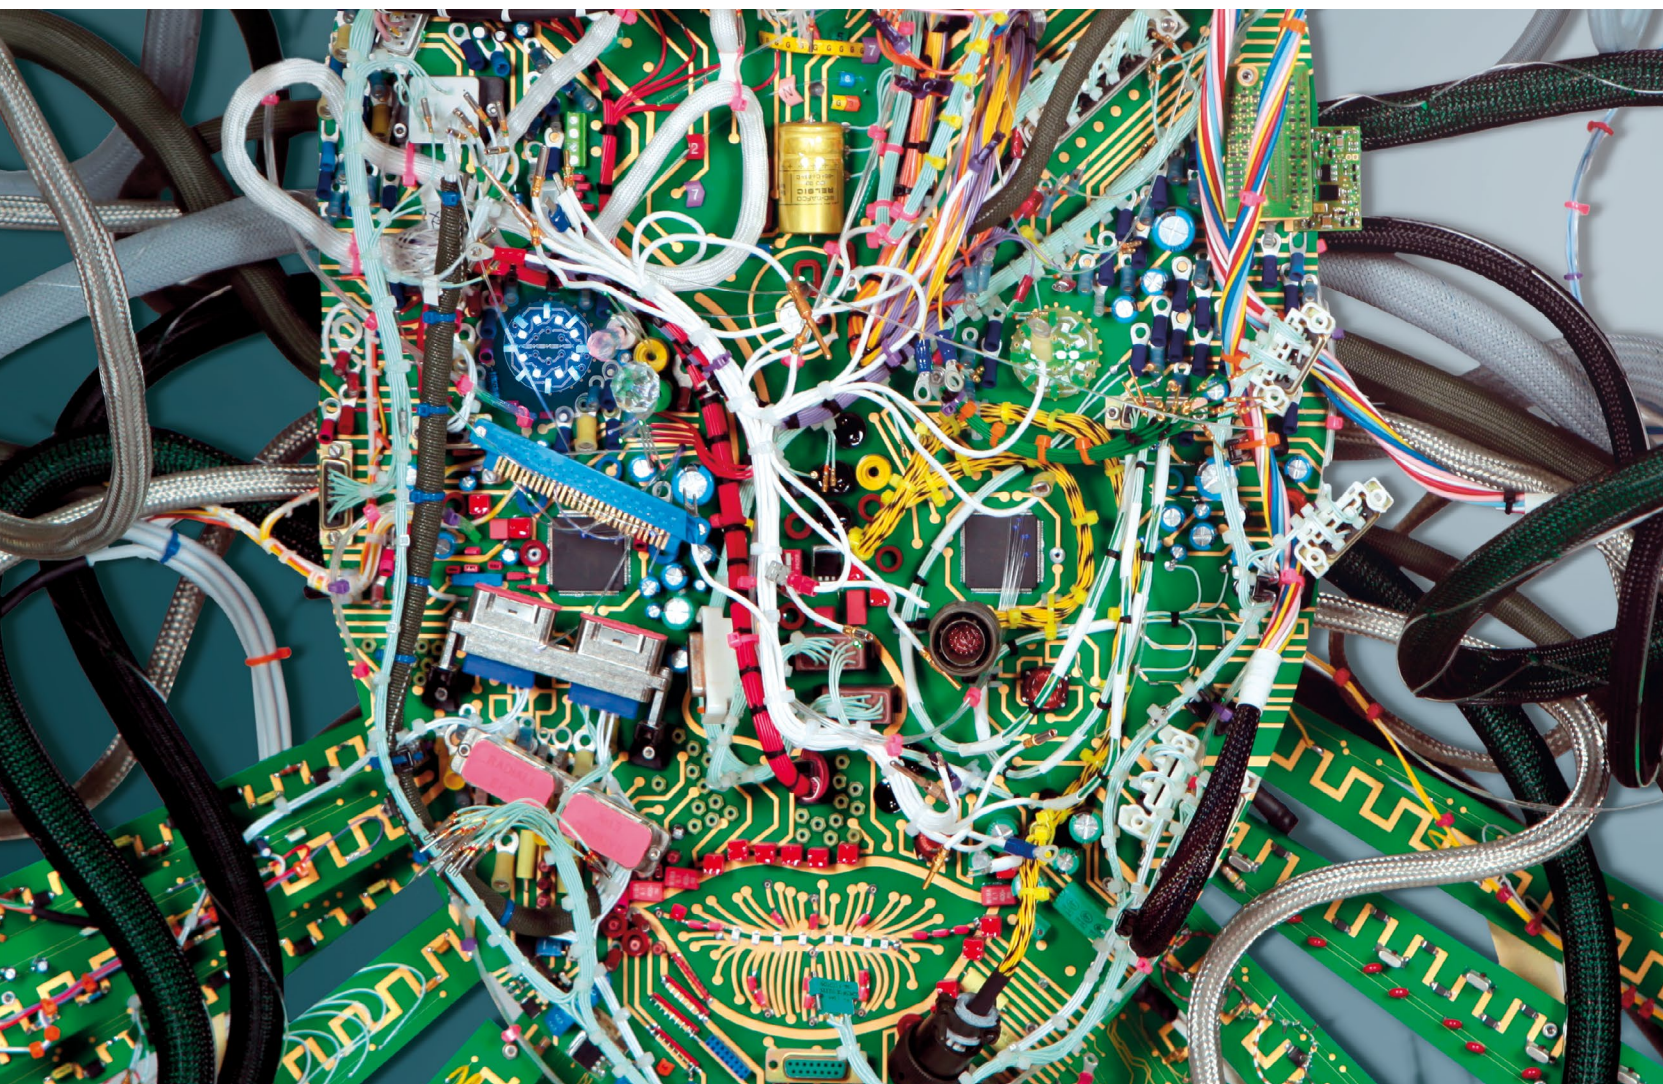

As soon as decided, Somalec intervenes within the framework of a controlled co-contracting.

- Card and wire mounting and cabling
- Control and integration of finished products.

Safe and practical, this AQLE production solution meets our customers' requirements for cost optimization.

MEDUSE, COMPANY EXTENSION

Imagined by a Picardy artist, this surprising figure from Greek mythology was created in 2015 in the heart of our workshops. The AQLE «Meduse» is a collective work. It brought together all the employees, each one having contributed a part of his know-how. With her characteristic hair, «Meduse» symbolizes the technical values and the values of commitment of AQLE. Multi-armed, multi-talented, multi-technology, multi-actor, «Meduse» goes beyond the AQLE framework to open itself to the world.

It is offered to all: our customers, suppliers and partners to become the common label of our commitments and expertise.

THE VALUE
OF OUR
EXPERTISE

AERONAUTICS - DEFENCE - ENERGY - RAIL - AUTOMOTIVE - MEDICAL

We act as architects, developers and producers of solutions integrating electronic, card and wiring, mainly for medium and small series.

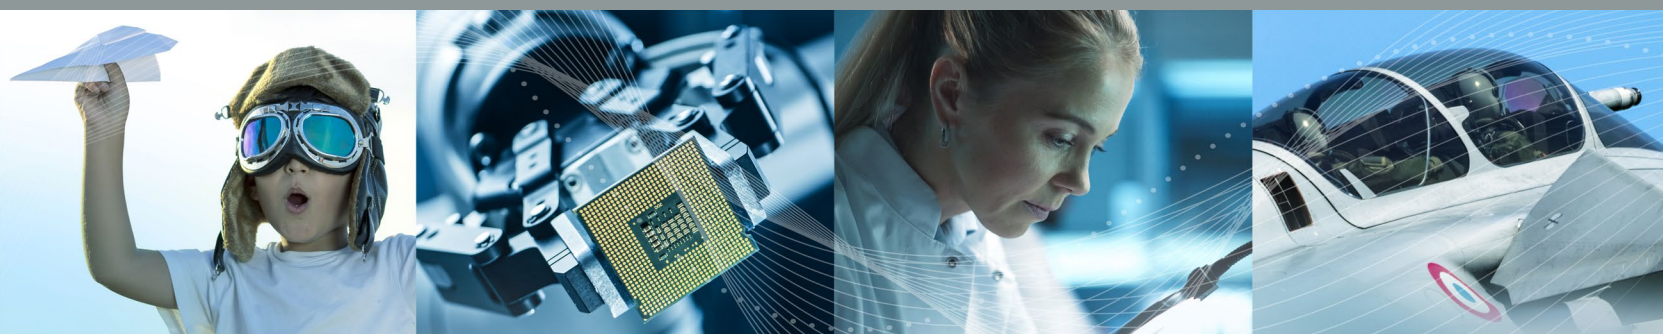

Our vocation is to help our clients accelerate their value creation by offering them our industrial expertise, our agility and our ability to federate a supply chain dedicated to highly technological and high value-added sectors through a specialised activity, which is of course major in all industrial sectors. In more ways than one, Méduse's «multi-branch» character is reflected in this business...

Aeronautics has always been a major part of our business (electric cores, flight controls, etc.). We also work for many other sectors, such as the Railway, Nuclear, Defence or the growing market of connected objects...

These different industries require multiple technical skills, and this for various operational expectations. For a permanent improvement of the performance, we want to register all our collaborations in a close, trusting and long-lasting working relationship.

AQLE 203● – Together, let's connect the world
